

## Homework # 3

<b>Assigned:</b>	Session 03	<b>Due:</b>	Session 04
------------------	------------	-------------	------------

<b>Objective:</b>	Use advanced CSS techniques and alternate stylesheets
-------------------	---

<b>Specifications:</b>	<p>You will need to partner and coordinate with another COMP1950 student to complete this lab.</p> <p>Create an alternate stylesheet for the homework # 1 homepage of your partner. Since you won't have access to their FTP credentials, you will need to have them provide you with a copy of all relevant files (html, css, images, etc). Once you have created your new stylesheet send your partner a copy (and any other relevant files such as background images your CSS uses).</p> <p>As much as possible, try to make your alternate stylesheet display your partner's homepage as significantly different. Your stylesheet must style the page with different fonts/typesetting, color schemes, and possibly also layouts and background images. Make an effort to create a visually appealing style that is clearly distinct from the original.</p> <p>Do not make changes to the HTML code of your partner's homepage, other than adding the appropriate link tags to the head section.</p> <p>When you receive the styles your partner writes for your homepage, apply them as an alternate stylesheet. The title of your alternate stylesheet <b>MUST</b> include the fullname of your partner.</p> <p>Demonstrate the following CSS techniques in your stylesheet:</p> <ul style="list-style-type: none"><li>- id, class and HTML selectors</li><li>- Descendant selectors</li><li>- Child Selectors</li><li>- Attribute selectors</li><li>- Pseudoclasses</li></ul> <p>You may optionally deploy additional CSS techniques at your discretion.</p> <p>Upload your completed work to the class server.</p>
------------------------	--

<b>Evaluation:</b>	10 marks for meeting all specifications.
--------------------	--

**Notes:**

If your homepage is poorly developed, your partner will be unable to build a decent alternative stylesheet. If you or your instructor was unsatisfied with any aspect of your homepage, you should fix the issues or write a new one.

The Firefox browser provides built in support for alternate stylesheets, accessible via the menu View > Page Style. If you cannot find the text menus, right click on the Firefox title bar, and enable the 'Menu Bar'
